The following is an examiner's statement of reasons for allowance: In view of the applicant's declaration of 11/19/03 and the recitation of "sol" in Kurachi et al., it appears that the stannic acid of the patentee is not dissolved as required by the instant claims. The increase in film smoothness evidenced by the further examples of the declarant is not readily predictable as many salt solutions give crystallization, i.e. large precipitated particles, under the drying and heating conditions specified by the declarant. The examiner notes that the declarant's example 1 centrifuges the precipitate twice rather than rinsing it numerous times and does not test for chloride ion as does Kurachi et al. (column 23, lines 28-36). However, such a washing is expected to remove substantially all chloride ion and the patentee's recitation of "sol" is consistent with the declarant's statement that the patentee's example gives dispersed particles.

Japanese 02-261886 Hiroshi is further noted as being relevant but does not disclose the aqueous solution as containing stannic acid as its major component, as required by the instant claims, nor does it provide rationale to use more than the disclosed 40 wt% solids of stannic acid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
